

Design

Music Player Design Plan 🎵

- 1 Wireframe First – Sketch the layout (controls, playlist, seek bar).
- 2 Build UI – Style the player using HTML & CSS (buttons, progress bar, dark mode).
- 3 Add Music Logic – Use JavaScript Audio API for play, pause, volume, and progress tracking.
- 4 Create Playlist Feature – Allow users to add/remove songs, save playlists (localStorage).
- 5 Make It Responsive – Ensure it works on mobile & desktop, add dark mode toggle.
- 6 Test & Refine – Fix bugs, optimize performance, and test in different browsers.
- 7 Deploy & Improve – Host on GitHub, Netlify, get feedback, and refine.
